## INTRODUCTION

The information provided by site <https://tech2talk.github.io/vms-and-containers/> or <https://github.com/tech2talk/vms-and-containers> is for informational purposes only. All information on the aforementioned sites and within source code or within documents contained on them is provided “AS IS”. I make no representation or warranty of any kind, express or implied, regarding the accuracy, adequacy, validity, reliability, availability or completeness of any information contained or hosted within these sites.

Under no circumstance shall I have any liability to you or any user for any loss or damage of any kind incurred as a result of the use of or reliance on any information provided on the aforementioned sites or the documents contained within them. Your use of the aforementioned sites and your reliance on any information contained within documents including but not limited to source code is solely at your own risk. This [disclaimer template](#) was created using Termly.

## EXTERNAL LINKS DISCLAIMER

The documents stored or hosted on the aforementioned sites contain links to other websites or content belonging to or originating from third parties or links to websites and features in banners or other advertising. Such external links are not investigated, monitored, or checked for accuracy, adequacy, validity, reliability, availability or completeness by me.

I do not warrant, endorse, guarantee, or assume responsibility for the accuracy or reliability of any information offered by third-party websites mentioned in any documents or source code. I will not be a party to or in any way be responsible for monitoring any transaction between you and third-party providers of products or services.

**BY USING THESE WEBSITES ( <https://tech2talk.github.io/vms-and-containers/> or <https://github.com/tech2talk/vms-and-containers> ) OR THE INFORMATION CONTAINED ON THEM OR WITHIN ANY DOCUMENTS STORED IN THESE SITES INCLUDING BUT NOT LIMITED TO SOURCE CODE, YOU AGREE TO THE “DISCLAIMER” (INCLUDING “EXTERNAL LINKS DISCLAIMER”) SPECIFIED IN ALL OF THE PREVIOUS PAGES AS WELL AS THE CURRENT PAGE OF THIS DOCUMENT.**

This disclaimer is also available at the following link.

<https://tech2talk.github.io/vms-and-containers/disclaimer.pdf>

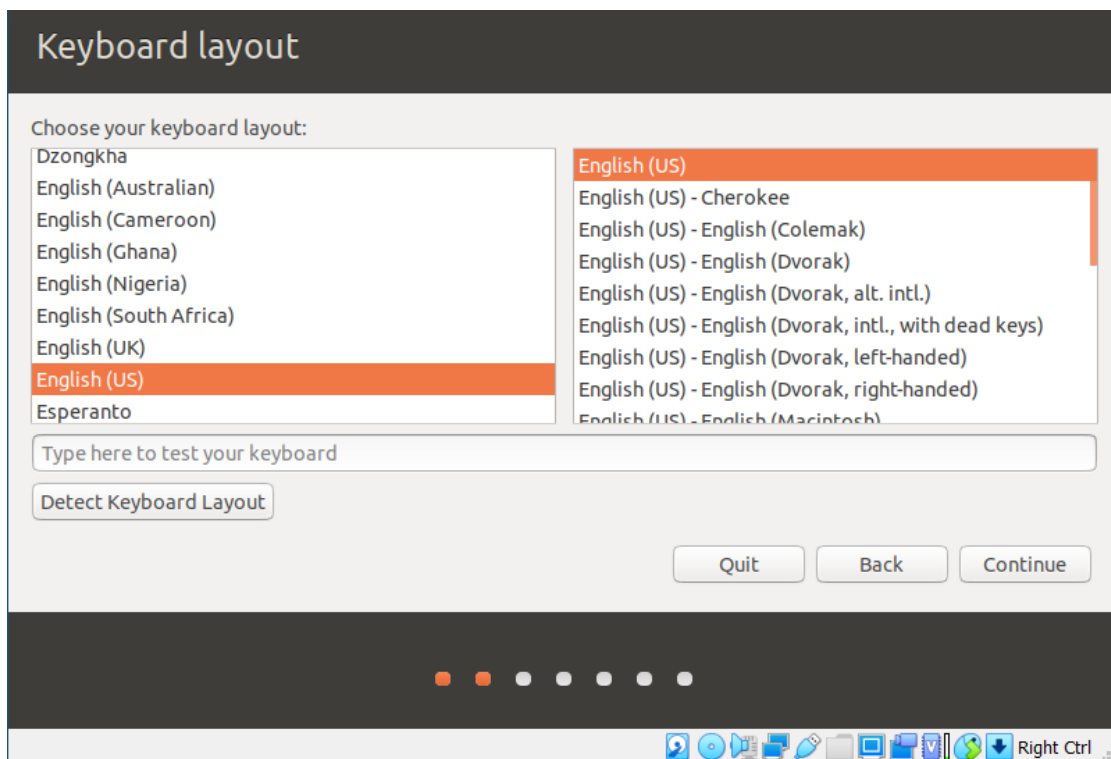

1. Start VirtualBox from Start Menu.
2. Select “Ubuntu workstation 18.04” and click Start.

3. If you get a message or a window pops up asking you to select a disk or optical drive then just close it.
4. At this point the virtual machine will start running Ubuntu installer.
5. Click “Install Ubuntu”

6. Click Continue.

7. select “Minimal installation”, leave the rest as it is and then click “Continue”

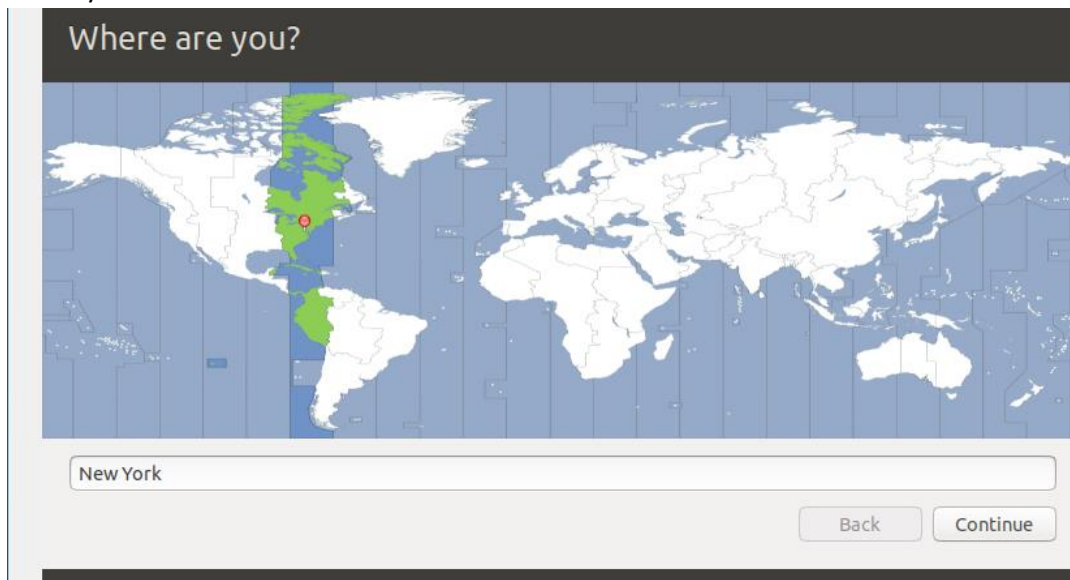

8. Click “Install Now”

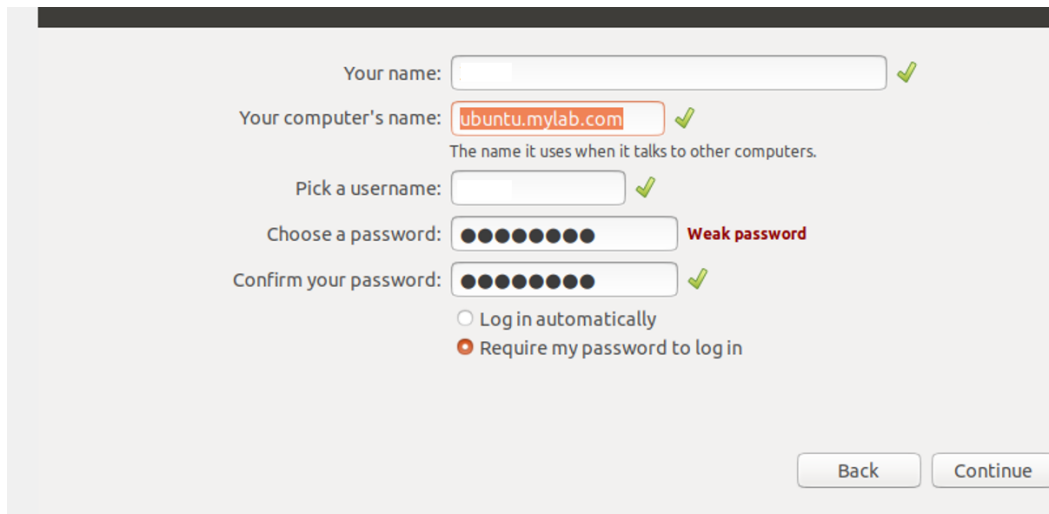

9. Click “Continue”

10. Select your time zone and then click Continue.

11. Type your **user name, password** and copy the following into **"your computer's name"**  
**"ubuntu.mylab.com"**

This is a screenshot of the Ubuntu installer's configuration screen. It contains several input fields and checkboxes. The 'Your name' field is empty with a green checkmark. The 'Your computer's name' field contains 'ubuntu.mylab.com' with a green checkmark and a note below it: 'The name it uses when it talks to other computers.' The 'Pick a username' field is empty with a green checkmark. The 'Choose a password' field contains ten black dots, with a red 'Weak password' warning to its right. The 'Confirm your password' field also contains ten black dots with a green checkmark. Below these fields are two radio buttons: 'Log in automatically' (unselected) and 'Require my password to log in' (selected). At the bottom right are 'Back' and 'Continue' buttons.

Your name:  ✓

Your computer's name:  ✓  
The name it uses when it talks to other computers.

Pick a username:  ✓

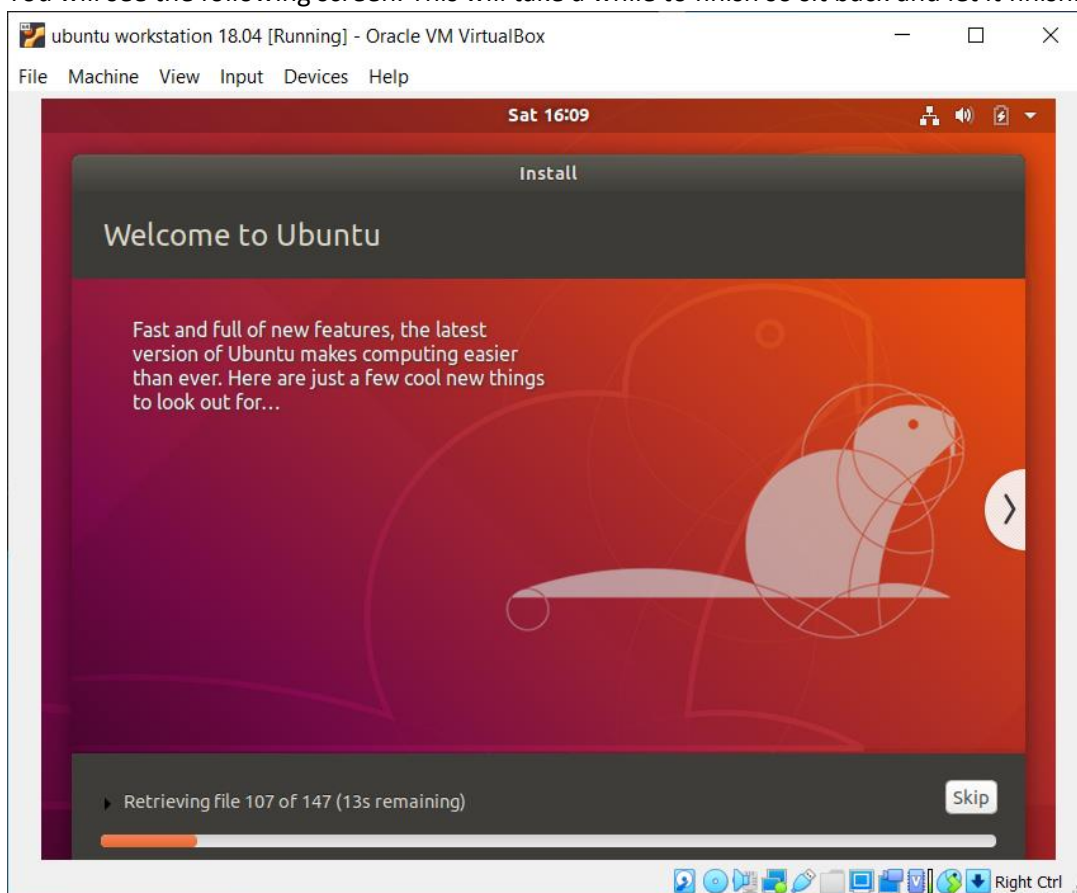

Choose a password:  Weak password

Confirm your password:  ✓

☐ Log in automatically  
☒ Require my password to log in

Back Continue

12. You will see the following screen. This will take a while to finish so sit back and let it finish.

13. Click "Restart Now"

14. Click inside the Virtual Machine and then hit enter.

15. You may see something like following screen, just let it boot.

16. Login to Ubuntu using your user name and password that you created earlier in the installation process.
17. Click “Don’t Upgrade” if you get the following message.

18. Click Next.

19. Click “Next” again.
20. Select “No, don’t send system info” and then click next.

21. Click Done.
22. Click "Install Now" if you get the following message.

23. Enter the password you created earlier and click Authenticate.

24. Next, we are going to install some required S/W using terminal.

First click on the **9 white dots** at the left bottom corner and then click on **Terminal**  
If you can't see Terminal then search for it in the search box.

25. Copy the following command in the opened terminal window and hit enter

`sudo apt-get update`

26. Once the previous command is done, copy the following command in the same Terminal window and hit enter.

`sudo apt-get install gcc make perl`

Type “Y” when you get promoted in the shell and hit enter.

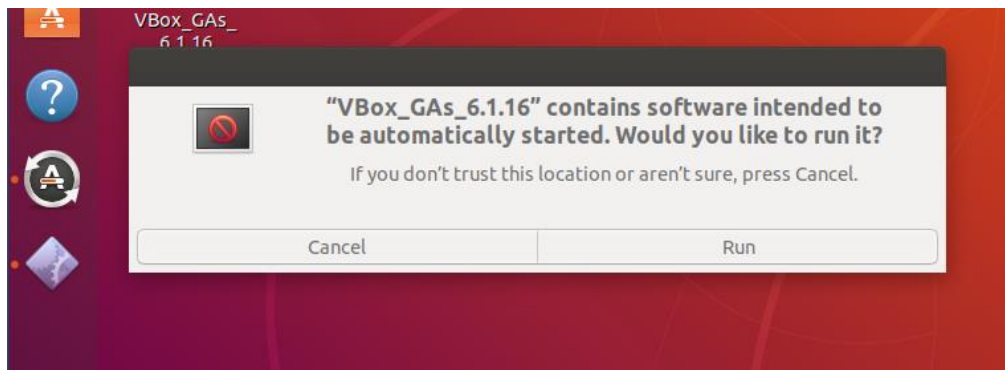

27. Next, we are going to install guest add-ons.

Click on “Devices” → “Install Guest Additions CD image”

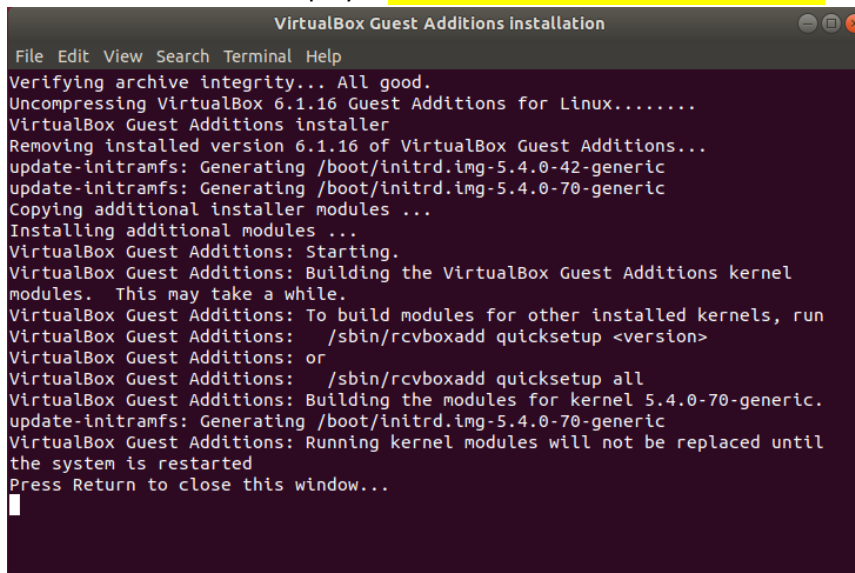

28. Click “Run”

29. Enter your password that you created earlier.

30. Click Enter when shell displays “Press Return to close this window...”

31. Click on the small downwards pointing arrow in the right top corner and then click on the power button to restart the virtual machine.

32. Login to the virtual machine. You can maximize the display for this virtual machine using following.

If needed, minimize it by moving your mouse to the center top of the screen and then clicking restore.

33. You can see all the installed programs by clicking **9 dots** at the bottom left corner and then by clicking “All”.

34. Open Firefox browser on your Ubuntu machine and visit or go to following link.  
Follow all the steps from the opened guide on your Ubuntu.
